

AUTOMOTIVE INDUSTRY

On the road to success

AUTOMOTIVE INDUSTRY

Automotive Industry

At **LTG**, we have numerous years of experience in the automotive sector. State-of-the-art resources, assuring automotive manufacturers and OEMs of a personalized and professional service that is focused on this highly dynamic and flexible industry.

The company offers tailor-made, efficient solutions to meet your specific requirements, whether it is to assist with sub-assembly operations, warehousing and or transporting parts and accessories to another destination or dealership. We will ensure that your components are managed professionally reach their destinations promptly every time.

LTG offers a comprehensive range of transportation modes, including road, rail, sea and airfreight, from any strategically positioned facility. A fleet with specialized equipment for any type of cargo can also be arranged.

Furthermore, LTG's in-house logistics experts provide a comprehensive supply chain offering to assist you in making the best business decisions to enhance your cost efficiency.

In addition, we have the partnerships in place to negotiate the best rates and to manage import and export clearing, as well as ensure the best allocation and routing for all product handling.

A service experience that is both professional and personal

Our supply chain offering

- **Order management system** – single or multiple supplier orders are entered into the system and are linked to the shipment reports. Simultaneous monitoring of orders and shipments.

- **Compliance** – export declarations, commercial invoices, certificates of origin, letter of credit processing, carnets, and free domicile shipments, as well as government legislation and international regulations, such as SADC, EU, AGOA, ISF, AES and APDP.

- **Movement of cargo** – multimodal services for land, air and sea shipments, as well as warehousing facilities. Cross-docking operations.

- **Risk management** – to mitigate financial-, cargo-, lead time- and on time delivery-, supply chain-, environmental and socio-economic risks.

- **Reverse logistics** – freight return, asset recovery, registration for re-importation (DA 65) and temporary importation for processing and repair shipments.

- **E-commerce** – electronic data interchange and communication, system integration.

- JIT delivery systems.
- Production logistics and material management.
